

## Sanergy

*May 3 2016*

**Sanergy** promotes sustained access to quality sanitation in informal settlements. It creates an efficient, equitable and sustainable sanitation cycle by building a network of small- scale sanitation centers (called Fresh Life Toilets) across slums, developing an affordable containerized waste collection infrastructure, and converting this waste at a central processing facility into organic fertilizer, insect-based animal feed and other high-margin products that address serious challenges in the agricultural sector.
